

Mercury Payment Systems is DIGITAL DINING's Premier Partner. We continue to strengthen our relationship through our state-of-the-art integrated credit and gift card processing technology. Mercury works to match your current rates or provide the most competitive rates for new businesses while delivering unparalleled merchant services and business management tools.

DIGITAL DINING has aggressively worked to stay on top of PCI compliance and offers PA DSS validated payment processing applications. We keep pace with the increasingly strict demands of card data security within our industry to protect our restaurants and their customers. We are also the leader in "order and pay" at the table technology, minimizing credit card fraud and keeping your customers' card data secure.

Mercury Premier Partner

Mercury Payment Systems' level of customer service is unparalleled, with 24/7 technical support for the customer and the Digital Dining dealer community to troubleshoot issues. Restaurant owners can also take advantage of Mercury's PCI Partner Program to help maintain ongoing compliance and potential reimbursement of up to \$40,000 for forensic audit and relating fines if you are breached.

Integrated Technology

Digital Dining helps simplify business management with automated services such as online transaction reporting powered by the MercuryView™ portal. We offer real-time transaction data plus a host of enhanced reporting features to help manage finances and streamline the bookkeeping process.

Integrated Gift Card Interface

The MercuryGift® card program delivers everything you need to generate new revenue, increase brand exposure, and easily manage gift card sales for a single store or an entire chain. Our integrated MercuryGift platform provides automated funds transfer, reconciliation, and reporting features, making it easy to track gift card sales without any extra bookkeeping effort.

MercuryStand-In™

Digital Dining guarantees continuous payment processing. If a payment processing outage occurs, Mercury activates a unique "stand-in" service so your business continues as usual. Mercury stands in to authorize payments during an authorization network disruption and guarantees no financial loss to our restaurants during the stand-in period.

Full PCI Compliance

For over three years, we have worked to keep Digital Dining compliant with the Payment Card Industry Data Security Standard (PCI DSS). To continue this process, Menusoft hired Coal Fire, a qualified security assessor, to perform our PA DSS audit to ensure that our product provides the fullest protection for our clients' vital credit card transaction data.

Features	Benefits
MercuryAlerts™ Proactively Minimizes Processing Problems	Mercury Payment can alert your Digital Dining dealer to processing irregularities at your restaurant, so they can help you avoid serious problems. We developed this advanced technology to provide proactive (and free) troubleshooting services. Our customizable alert settings drive individualized customer service.
Verification for Partial Payments	The POS can accept partial payments for a check, even if the check is not split. For instance, you can pay part of a check with a credit card, then pay the remainder of the check with another credit card, cash, or any other valid receipt type.
Opening Bar Tabs with a Card Swipe	Bartenders can open a bar tab by simply swiping a customer's credit card. You can also set the POS to preauthorize credit card tabs up to a customizable preset amount.
Customized Data Entry Requirements	When accepting a credit card payment over the phone, the POS can require servers (with a manager's permission) to manually enter a card's CVV2 number, or the card holder's street address and ZIP code.
